DETAILED ACTION

1. This is in response to the Applicant's arguments filed on August 10, 2005 in which claims 4-6 have been added. Claims 1-6 are currently pending.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Coad et al. (US 5,966,652).

The applied reference has a common assignee and inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding claims 1-3, Coad teaches a wireless communication device (fig. 2, item 102) comprising: a keypad (20) having buttons, wherein the buttons have

alphabetical characters mapped to corresponding numeric characters (i.e., convert alphabetic text into the corresponding keys on the keypad, col. 8, lines 41-42); a memory configured to store a string of alphanumeric characters representing a telephone number (i.e., alphanumeric stored in memory 116, col. 9, lines 55-60); an alphanumeric converter, coupled with memory, configured to receive the string of alphanumeric characters into corresponding numeric characters and to translate the string of alphanumeric characters into corresponding numeric characters (col. 8, lines 36-59, col. 11, lines 1-3).

Regarding claims 4-6, Coad teaches identifying the string of Alphanumeric characters stored in the memory (alphanumeric messages are stored in memory 116, col. 9, lines 57-60); retrieving the string of alphanumeric characters from the memory (i.e., extracted phone number can be displayed as alphanumeric character, col. 10, lines 42-67); executing a dialing function using the string of alphanumeric characters received from the memory (col. 10, line 42 to col. 11, line 3); and dialing the telephone number using the numeric characters (i.e., converting the message into a dialable telephone number (col. 10).

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jean A. Gelin whose telephone number is (571) 272-7842. The examiner can normally be reached on 9:30 AM to 7:00 PM.

Art Unit: 2681

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, George Eng can be reached on (571) 272-7495. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
